

# Local Match Funding

Multiply federal, state, grant funding with SP local match

## SP converts your infrastructure to a utility service

Federal, state, and other granted funds often require a local match. As funds are distributed and you prioritize essential infrastructure needs, take advantage of the matching investment offered by Sustainability Partners (SP). SP works with your staff to identify highest quality products with trusted installers and service providers. We then procure the solutions and have them commissioned at no cost to you.

SP is a usage based utility model. We assume ownership responsibilities of essential infrastructure without interfering with your use. SP can also provide flexibility for you to own the infrastructure to satisfy specific requirements for certain grants.

When essential infrastructure assets are modernized, significant cost savings and performance improvements are achieved as old, unreliable, and costly assets are replaced.

Using the new asset's useful life, expected maintenance, and desired years with no usage fees, SP can provide you local match funding. SP will facilitate any combination of design, purchase, install, maintenance and long-term upgrades of state-of-the-art assets. We solve your capital needs for infrastructure and partner with you to keep it safe, reliable, and efficient.

### IMMEDIATE & LONG-TERM BENEFITS:

- **Immediate positive cash flow due to lower utility, maintenance, and repair costs**
- **More and higher quality assets in months versus years, all with years at no cost**
- **Positive balance sheet impact due to elimination of deferred maintenance**
- **Lower carbon emissions, improve working conditions, meet sustainability goals**
- **Long term plan for healthy well-maintained infrastructure**
- **Asset use is entirely in your control**

**Enjoy years of new and efficient infrastructure without increased costs, plus keep all savings in energy, maintenance, and repair while retaining full operating control.**
